The results obtained from the analysis of the difference spectra are as follows. 1. The pigment molecules with a Schiff base structure, the acid-base form of the visual pigment, show a negative dichroic band at 400 nm of their difference spectrum, corresponding to the difference spectrum between the short-wavelength-sensitive (S) and the long-wavelength-sensitive (L) visual pigments. 2. The pigment molecules with a histidine structure, the isoprenoid linkage-modified form of the visual pigment, show a negative dichroic band at 490 nm of their difference spectrum, corresponding to the difference spectrum between the middle-wavelength-sensitive (M) and the long-wavelength-sensitive (L) visual pigments. These results would be interpreted as that two different series of pigment molecules exist in the visual pigments, one having a Schiff base structure and another having a histidine structure.On June 6, 2000, the Wall Street Journal warned that the major stock market averages appeared to be in a "danger zone." The warning, predating the most recent sell-off in the market, caused the Dow Jones Industrial Average to plunge by more than 400 points as the article, written by Lillian R. LaHue, stated that the "recent decline in American stock values may have caught the bulls and the bears alike unawares and that 'the danger zone' may have widened." The Dow Jones Industrial Average was the market of choice for the Journal. Nearly two decades later, an area of the market has emerged as the focus of investors with a market that in many ways mirrors that of the United States. Its first flight was in 1972 and its first air-to-air combat was in 1974. The F-16 is the most widely deployed and combat-tested air-to-air weapon system ever, with over 10,000 aircraft in service worldwide, and more than 6,000 air-to-air combat missions flown. In both air-to-air and air-to-surface missions, the F-16 is mostly flown by pilots of the F-16 Fighting Falcon, as well as by squadrons of the United States Air Force and by the Allied air forces. In the 1980s, the F-16 was modernized and enhanced, mostly to meet the demands of the Israeli Air Force, which was the first country to use the F-16 in combat. This modification became known as the Israeli F-16, and has since become the standard F-16, not only for the IAF but for the rest of the world as well. In late 1994, the US Air Force placed a full order for the F-16, which has been the premier fighter aircraft used by the US Air Force since then. However, the rate of production of the F-16 is so high that orders from other
